Active Science Let's Go!

We challenge you to get up and actively explore the sounds in nature blindfolded. Can you locate different things just using sound? What sounds can you hear in your living room? What sounds can you hear in the park?

1. Listen in your home. Stay silent for 1 minute (hard I know!) and then identify 5 different sounds you can hear. How many are natural sounds?
2. Get your shoes on and head outside. Stay silent for 1 minute and identify 5 different sounds you can hear. How many are natural sounds?
3. Why not go further? Walk to your local greenspace and see if this sounds different?
